

THE ARMCHAIR: WELLNESS IN THE OFFICE AND AT HOME.

AVIA: THE ANSWER

AVIA is the Talin's directional armchair become a cult and a best seller all around the world.

The frame has a slim back realised in metal and upholstered by an injection foam flame retardant with integrated ELS (Elastic Lumbar Support).

The ergonomic and the design attention put on the AVIA project from the Talin's research center, has permitted to obtain an high performance armchair and a long term comfort seating with the right circulation of the blood during all the work time.

The directional version with slim fixed head-rest, is available also with the adjustable curved one.

The hand polished cast aluminium structure connect seat, back, arms and mechanism and has a weight of over 3,5 kg.

The technical function is completed by a

unique design giving to this particular an "artwork" aspect.

Stainless steel hand polished arms complete the metal elements presents in the AVIA project.

Born for the managerial office furnishing, AVIA is available also in the task version with medium and / or low back, with various solutions as for mechanisms, arms, colours finishes and fabrics or leathers.

Also AVIA is projected and produced into the Talin's center in Italy, with particular attention to the Design (ergonomic attention), to the quality standards of construction (EN 1335), to the environmental standards (ISO 14001), to the total quality standards (ISO 9001), to the social responsibility standards (SA 8000).

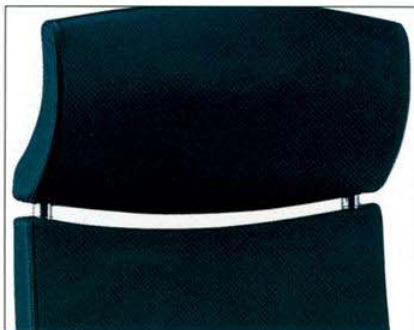

AVIA
